NK Loupe & Multi Light & NK Cam

Why NK loupe?

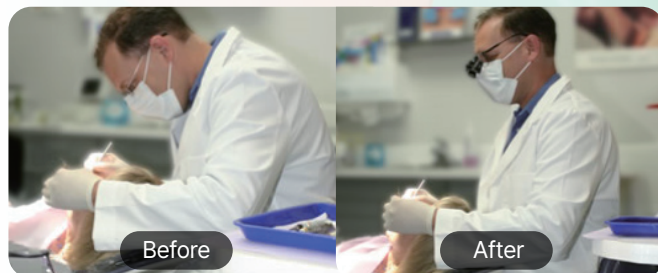

P German Mineral Lens

 Made In Korea

I Building User Convenience

- 1 NK's frame design is lighter than flip-up type and other company's TTL loupes by ergonomically designing. And this stable frame is made of pure titanium and is coated with special plating, and cut off the source of allergy.
- 2 It has a wide field and depth by using mineral lenses.

I Correct posture

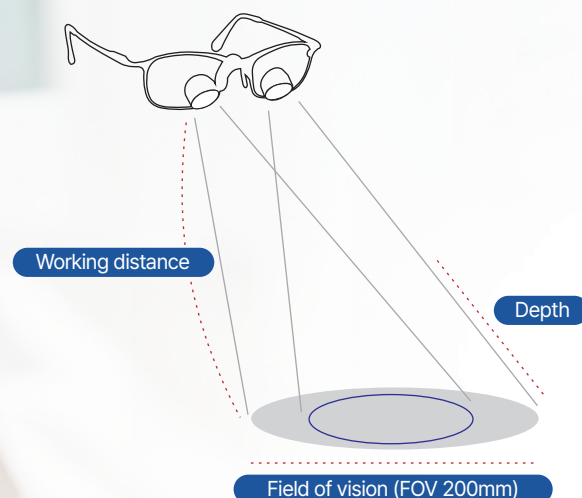

- 1 NK Loupes help you correct your posture by guiding you to the right posture. It provides a large view of the image to reduce eye strain. It's easier and more precise to practice.

I Advantage of TTL loupe

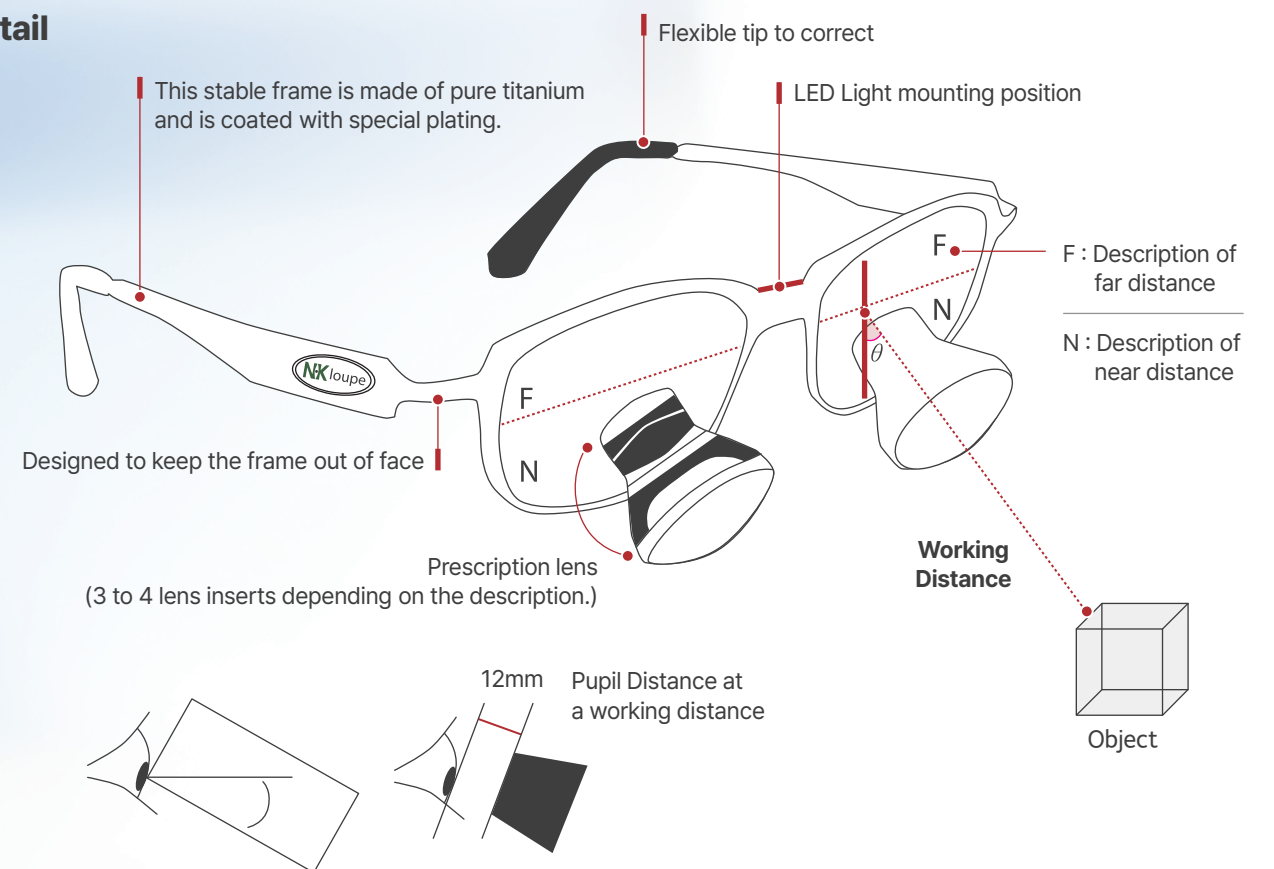

- 1 TTL loupes are attached to glasses, so it has a wide visibility because they are close to the distance.
- 2 TTL loupes are light because they don't have PD control device.

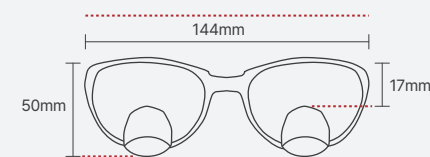

I Magnification Option (ex. Working Distance : 40cm)
